

Staff Site Reliability Engineer with 12+ years of experience designing, operating, and evolving production infrastructure for distributed systems at global scale — spanning large-scale Kubernetes platform engineering, cloud architecture, high-stakes incident command, and reliability practice across hypergrowth environments. At Delivery Hero's Tech Foundations Domain, I own the reliability, scalability, and operational posture of a Kubernetes platform processing **5M+ API requests per hour** across **100+ production clusters**. I define SLOs and error budgets with engineering teams, lead production readiness reviews, and drive incident management from detection through post-mortem — having contained some of the highest revenue-impact failures in the company's history, including AWS region outages and cluster-wide IP exhaustion. I mentor and train junior engineers, re-architect systems for fault-tolerance and efficiency, and build automation that eliminates toil at scale.

SKILLS

Kubernetes & Platform
EKS · kOps · Fleet Mgmt (100+ clusters) · Cluster Lifecycle Automation · Helm · Custom Controllers

Observability
Prometheus (remote write, high-cardinality) · Loki · Grafana · Datadog · ELK / OpenSearch · OpenTelemetry · SysDig · AWS CloudWatch

Cloud & IaC
AWS (EKS, EC2, VPC, RDS, S3, IAM, Route53) · Terraform · CloudFormation · GitOps · ArgoCD

SRE Practice
SLO/SLI · Error Budgets · Incident Command · Post-mortems · Capacity Planning · Prod Readiness Reviews · Runbook Automation

CI/CD & Dev Tools
GitHub Actions · Jenkins · Drone CI · Spinnaker · Concourse · AWS CodePipeline

Agentic AI & LLM Tooling
AI-assisted incident triage · LLM-powered runbook automation · MCP server design for infrastructure APIs · Agentic observability workflows · AI-augmented anomaly detection

Languages
Go · Python · Bash · JavaScript

Databases
Aurora (PG/MySQL) · DynamoDB · ElastiCache · Kafka · SNS/SQS

EDUCATION

BTech, Information Technology
West Bengal University of Technology
2009 – 2013

LANGUAGES

English (Native)

WORK EXPERIENCE

Staff Systems Engineer Dec 2021 — Present
Delivery Hero SE, Berlin · Tech Foundations Domain

- Own and operate **100+ production EKS clusters** averaging 200+ nodes each, running thousands of workloads and sustaining **5M+ API requests/hour** — infrastructure backbone for one of Europe's largest on-demand logistics platforms.
- Lead **high-stakes incident response** for the company's highest revenue-impact events — AWS region outages and cluster-wide IPv4 exhaustion — protecting millions in revenue through rapid containment and systematic remediation.
- Managed **EKS version upgrades across the entire fleet** from 1.21 → 1.32; developed an internal automation tool that reduced per-cluster upgrade lead time from **2 weeks to 2 hours**, decoupling upgrades from maintenance window constraints.
- Sustained **metrics and log ingestion at platform scale** on Prometheus and Loki — tuning remote write pipelines, resolving high-cardinality bottlenecks, and managing label explosion across thousands of workloads.
- Lead **production readiness reviews** and define SLOs/error budgets with engineering teams; implement burn-rate alerting and fleet-wide dashboards that serve both on-call engineers and engineering leadership.
- Drive **fleet-wide cost optimization** through cluster utilization analysis, node right-sizing, and fault-tolerant topology design that maximizes resource efficiency without sacrificing availability.
- Re-architect and redesign critical platform systems delivering multi-fold reliability improvements; **train and onboard every junior engineer** joining the team — structured knowledge transfer on infrastructure topology, failure patterns, and operational caveats.
- Actively integrating **agentic AI into operational workflows** — building LLM-powered tooling for automated alert correlation, incident summarization, and runbook execution; exploring MCP server interfaces that expose fleet and observability APIs to AI agents for autonomous diagnosis and remediation.

Cloud Systems Developer Oct 2019 — Nov 2021
Cloudearch GmbH, Berlin · Consulting for VW Financial Services

- Architected and delivered a highly available, multi-region API platform on AWS for VW Financial Services — the cloud development foundation for a major European automotive finance enterprise.
- Conducted AWS cost optimization: right-sized compute and database instances, implemented Reserved Instance and Savings Plans coverage, established tagging hygiene for per-service cost attribution.
- Designed per-service monitoring on Datadog and Dynatrace — latency, error rate, and throughput baselines enabling regression detection before customer impact.

Cloud Consultant Jul 2017 — Aug 2019
Tata Consultancy Services, Bergen · Consulting for DNB (Nordic Bank)

- Greenfield build of a customer-centric banking application on AWS for one of the largest Nordic banks — infrastructure provisioning through production go-live.
- Led CI/CD initiatives, Well-Architected Review execution, and a cross-project cost optimization program post-launch.

DevOps Engineer Mar 2014 — Jun 2017
Tata Consultancy Services, Frankfurt · Consulting for Deutsche Börse AG

- Set up automation, test suites, and CI/CD pipelines for a new product initiative at Deutsche Börse — a high-compliance financial exchange environment.
- Owned operational support and patch management for production workloads throughout the engagement.
